

# Dimension Hub™ for EnterpriseOne Testing

Test your system, not your patience

## Added Value

- Minimize the number of objects that need testing
- Reduce the effort required to setup, edit and execute tests
- Reduce testing costs by up to 85%
- No need for specialist test programming skills
- Pay-As-You-Save subscription-based pricing
- Automate test execution and documentation

## Applied Knowledge

Any changes to your JD Edwards EnterpriseOne code base requires testing; whether it be a business-as-usual change event or a major ESU.

The key to realizing savings on testing is to forensically understand your environment and the impact of each and every change. And then to automate your testing.

### Testing EnterpriseOne entails five elements:

1. Identify what to test
2. Plan what to test and how to test
3. Create and edit test scripts and scenarios
4. Execute and automate tests
5. Manage the end-to-end test process

DWS has developed a suite of EnterpriseOne testing products that reside in a secure cloud, the DWS **Dimension Hub™**. Our products identify just what needs testing and what does not, and enable non-technical staff to easily create, maintain and execute their own test scenarios.

**Plan and Manage**  
Reduces the number of objects you need to test.

**Automate**  
Reduces the effort required to execute tests.

# What makes DWS Different?

DWS is recognized as a leading technical service and solutions company; specializing solely in JD Edwards EnterpriseOne (E1).

We have a history of innovation that has enabled us to develop the award-winning DWS Dimension™ Suite of software-led services and applications software that continually drives down your costs and improves the quality, maintenance and management of your E1 system.

## Analyze Change

**Dimension Focus™** is the first product available to JD Edwards customers that will forensically analyze your entire EnterpriseOne system to identify exactly which objects are impacted when you make a change.

- Analyze the impact of any change event on your E1 system down to event or function level
- Work with Electronic Software Updates (ESU) and your custom code (Mods)
- No need to install the ESU to prepare your testing – we read directly from the ESU folders
- Highlight dependencies within your E1 instance to identify both direct and indirect impact of changes
- Identify what needs testing and what does not
- Use heat map and impact score to identify where to focus your testing effort
- Highlight the quickest route from an application or batch job to the impacted objects
- Works with your own menu IDs, users and roles

## Script and Test

**Dimension SwiftTest™** integrates natively with EnterpriseOne. It eases the burden of testing, making it simple to create, maintain and run test scripts. There is no need for specialist test engineers or programmers.

- Native integration to E1 to simplify test scenario building and editing
- Can be used on custom code as well as ESUs
- Easy to use by non-technical business analysts and super-users
- No need for time-consuming record and playback test set-up
- Schedule and track the status of multiple linked tests and their results
- Execution DataStore shares results between tests
- Pinpoint all test failures with user-friendly information regarding the reasons for failures
- Can be used in support of business continuity planning and systems audits

“Together, in support of business-as-usual or in support of a code-current strategy, Dimension Focus™ and Dimension SwiftTest™ can reduce testing effort and costs by up to 85%.”
