

# Upgrade Retrofit Services for JD EnterpriseOne

With Oracle's move to a Continuous Delivery strategy for JD Edwards EnterpriseOne, it is more important than ever that customers look to upgrade to release 9.2. Not only will this enable you to take advantage of new functionality and processes, but also to remain code-current.

One of the biggest challenges associated with an upgrade is the uplifting or retrofitting of customizations. DWS offers a range of proprietary software and services, designed to help customers negotiate these technical retrofit challenges.

Retrofit Planning  
DWS Dimension Analyze™  
From B732 to 9.2, we are the retrofit experts

Dimension Analyze™ is a software-led service that audits your JD Edwards EnterpriseOne system, identifies what custom code is no longer required and estimates accurately the effort involved in upgrading to the new release.

Our Dimension Analyze service saved one customer in excess of \$1 million in retrofit developer effort.

We are flexible in our approach to any upgrade project. We can work alongside your in-house team to provide additional expertise when required, or as a dedicated upgrade resource, freeing your internal resource to focus on maintaining your live environment.

## Retrofit Execution DWS Dimension Professional™

Delivering the lowest defect levels in the industry

Dimension Professional™ is a suite of tools that allows DWS to fully manage the modifications uplift component of any EnterpriseOne upgrade. Utilizing the best upgrade approach, we are able to offer a fixed price and fixed timescale for your project.

Dimension Professional also leverages the results produced from the Dimension Analyze Service, enabling DWS to deliver the lowest defect levels in the industry.

- Establish fixed price & fixed timescale upgrades
- Access role-based tools for Project Managers, Developers and QA's
- View the exact location of all your EnterpriseOne changes
- Automatically scan your system for known E1 upgrade issues
- Accurately determine interdependencies between all E1 objects
- View "from" and "to" releases concurrently; resulting in a faster, more accurate upgrade
- View proprietary net change data to fully understand the impact of any upgrade
- Significantly increases developer productivity and "right first time" ratio

“ DWS is one of the most experienced upgrade members in the JD Edwards community. ”

Lyle Ekdahl, SVP and General Manager, Oracle JD Edwards

“ DWS were very flexible in their approach to the upgrade; working alongside Chivas developers to deliver the upgraded objects. Every aspect of the project has been managed very efficiently and professionally. ”

Applications Manager | Chivas Brothers Pernod Ricard

“ DWS were great to work with, very professional and delivered high quality and low defect levels of work. They came in ahead of schedule, which gave us extra time to plan the remaining go-live activities. ”

IT Manager | Brasfield & Gorrie

“ The DWS team worked seamlessly with our development and technical team. I can easily recommend them for both their Dimension Analyze service and their development project work. ”

Group Applications Manager | Silentnight
