

# Enterprise Apps Testing

Enterprise applications enable operations, serve as a system of record, and are a single source of the truth. These applications need to be rich in features and functions, robust, responsive to business need, and perhaps most importantly need to be well tested. They must always be fit for purpose and testing needs to be managed against a backdrop of continually evolving requirements and changing software.

DWS has a long-standing reputation for delivering market-leading services and software. We have built strong and long-lasting partnerships with our clients by building a detailed understanding of their specific requirements and consistently delivering high quality, on-time and within-budget solutions.

**No matter what your testing requirements or needs, DWS has the solution and is here to help.**

## DWS: a LogiGear Company

**Logi Gear**

The testing requirements of organizations are a function of their entire enterprise application landscape and the frequency with which applications in that landscape are changing. Many organizations do not have the bandwidth, desire, or expertise to do all their own testing. When companies are looking for help with testing DWS, as part of LogiGear, can step in and provide testing services to meet their specific needs.

We have a large team of testing professionals with extensive knowledge and experience. It doesn't matter what you want to test (e.g. SAP, EBS, PeopleSoft, Workday, Salesforce, Off-the-Shelf Integrations, Custom web apps, Custom games, etc.), nor does it matter which testing tools or technologies you would like to employ, we would like to discuss how we can help you meet your specific testing requirements.

*We are now able to run automated tests on every check-in, nightly and every weekend. The automated tests cover in 24 hours what used to take us several weeks to run manually.*

Chris Dunn, VP of Engineering.

Quality assurance  
is at the heart of  
everything we do

## QA Strategy Consulting

Our QA Consultants can perform an assessment, looking across your enterprise applications landscape, to create a roadmap that will ensure quality as you maintain, evolve and enhance your systems. With a strategic roadmap that incorporates and explicitly addresses quality assurance, your organization will more confidently pursue initiatives to digitally transform your operations. Through this work, we will assist with integrating test engineering and automated testing technologies. Following on from the strategic roadmap, we can help you plan and execute.

## Offshore and Onshore QA

When it comes to test execution and delivery, so much depends on your needs. You may require manual testing resources, resources that are intimately familiar with a particular testing tool, or resources that know and understand (or that can quickly learn) a system that needs to be tested. Alternatively, you may just want someone to come in and take the testing problem away from you. Whatever you require, we have resources Onshore and Offshore, that will deliver an unparalleled experience and well-tested quality solutions.

## QA Training

Our corporate training program helps organizations equip their testers with the relevant concepts, strategies, test methods and skills needed to effectively test increasingly complex software applications. Blending our training classes with your internal process creates an optimal body of testing knowledge that enables development, implementation and maintenance to create and deliver a culture of Software Testing excellence.

## Test Automation

Our Test Automation Experts are well-versed in a variety of Test Automation tools, from our own suite of testing products to LogiGear's flagship TestArchitect Low-Code Test Automation tool, to many open source and 3rd-party tools including Selenium, HP UFT, Quick Test Pro, Ranorex, and more. We have a test authoring approach that allows teams to test any leading enterprise applications.

## DevOps Consulting

An optimal DevOps strategy enables a quick and efficient development and deployment process that includes testing. All naturally using optimum methodologies and tools, chosen specifically for your business, with quality, maintenance, support and continuous innovation in mind.

## Get in touch to discuss

We'd love to learn more about your needs and how our testing services may be of value.
