

Senior Developer – EnterpriseOne

DWS is an award-winning Systems Integrator and Independent Software Vendor serving the Oracle ERP market that is also celebrating its 23rd year in business. We have a global reach and are headquartered west of London, U.K. DWS has developer resources in 13 countries situated in Europe, North and South America, Africa, Asia and Australasia.

If you are passionate about JD Edwards development, then you will fit right in at DWS. We are development specialists. It's what we do day in, day out. We have built some really cool tools that help the daily life of the EnterpriseOne Developer, as well as ensure a high-quality deliverable to our customers. You will work with like-minded people in an exceptional environment that fosters learning and problem sharing. You will not be sent out to the client on your own on day one – that is not how we do things here at DWS. You will get great support and a realistic expectation on how you will get up to speed in our team. This is a great opportunity to work with the 'A' team.

Who are you?

DWS is seeking an experienced Senior Developer to support its expanding customer base, with expertise in Oracle JD Edwards EnterpriseOne development. By 'senior' we mean; we expect you to have a real depth of understanding of the toolset and the more advanced areas mentioned below. We expect you to be a top trouble-shooter and problem solver and someone that can think on their feet.

You should be able to take customers' business requirements and convert these into working solutions using the EnterpriseOne toolset. You should also have the ability to create Business Services (BSSV) for Java-based web service applications, as this is a prerequisite for the role.

You should have at least five year's EnterpriseOne development experience and come equipped with the following skills and abilities:

- Ideally have worked in a senior developer role for a Systems Integrator in the past
- Possess strong problem solving and analytical skills.
- Understand customers business processes and customization requirements in order to translate them into development specification documents.
- Liaise with the customers Application Consultants and/or Business Analysts in order to analyse and finalize the functional and technical specifications.
- Provide development estimates to customers and DWS Project Managers.
- Have a good understanding of the JD Edwards database structures.
- Proven ability in the following software development tools and languages: EnterpriseOne development toolset including FDA and RDA, Microsoft Visual Studio, Event Rules/NER and C Business Functions.
- Expertise in Oracle JDeveloper and Java for the development of provider and consumer Business Services.
- Proven experience with BI Publisher, Orchestrator Studio and Mobile Application Framework would be an additional asset.
- Able to work remotely with minimal supervision.
- Provide regular and timely updates to the DWS Project Managers.
- Work either independently as required or within a team

The role

This will be a full-time or contract role providing application customization and development for DWS's customers. The role can be based either at the DWS's office in High Wycombe, UK, or from a remote location, as appropriate. Competitive rates are offered and the opportunity exists to work remotely and attain that much sought-after work/life balance.
